EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Atty. Barry Tummino on 10/07/2004.

The application has been amended as follows:

Claim 41 now reads as follows:

Claim 41 (Currently Amended) Measuring system for measuring pressure within a tire mounted on a wheel of a vehicle, comprising: an annular support mounted on the wheel within the tire for enabling operation of the wheel when the tire is flat; detector having a parameter sensor and a detector antenna tuned to a defined frequency, the detector being secured to the annular support a location spaced away from the wheel, the parameter sensor sensing air pressure within the tire and a transponder the detector transmitting pressure signals having an air pressure value portion that indicates the sensed air pressure within the tire; and central data processing unit mounted on the vehicle and coupled fixed antenna for receiving the transmitted pressure signals and for providing indications of the sensed air pressure wherein the fixed antenna is associated with the wheel and is arranged on the vehicle near the wheel, power for operating the detector being transferred from the fixed antenna to the parameter sensor through the detector

antenna, the parameter sensor having a capacitor for storing power received from the fixed antenna until use.

Therefore, claim 45 is cancelled.

Claims 46-48 now depends from claim 41 due to the cancellation of claim 45, and it newly reads as follows:

Claim 46 (Currently Amended) System as claimed in claim 41 wherein the wheel is formed from metal and the annular support insulates the detector antenna from the wheel.

Claim 47 (Currently Amended) System as claimed in claim 41 wherein the detector antenna is formed by one of a loop and a coil.

Claim 48 (Currently Amended) System as claimed in claim 41 wherein the associated fixed antenna is formed by one of a loop and coil that is centered over the axis of the wheel and is carried by a part of a wheel suspension that integral with the wheel.

Conclusion

2. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
